2018 ffiec geocode census report

New MSAs The June 2003 changes in the boundaries and terminology of the Metropolitan Statistical Area (MSA) raised questions from HMDA reporters. Answers to these questions can usually be found in Edits. For your convenience, here are answers to the most common questions: The new MSAs can be found in OMB Bulletin No. 03-04, Annex, List 2. A five-digit MSA code from the new List of MSAs should be used for any application that sees final action in 2004. Use the five-digit code for Metropolitan Divisions when available. A four-digit MSA code from the old list of MSAs should be used for any application that sees final action in 2003. Micropolitan Statistical Areas should not be used in HMDA reports. Combined Statistical Areas should not be used in HMDA reports. If your institution first became an HMDA reporter because of changes in MSA boundaries, you should start collecting data with applications received on January 1, 2004. You should not collect data about applications received in 2003, even if they see final action in 2004. This is a limited exception, only for new reporters, to the general rule that loan/application registration (LAR) should include all transactions that see final action in the lar year. Geocoding/mapping System The FFIEC Geocoding/Mapping System is a web-based tool designed to help financial institutions meet the legal requirement to report information about mortgage, commercial and agricultural loans. Geocoding refers to the Metropolitan Statistical Area (MSA), State, County, Census Bureau (address information) that must be provided for each reported loan. The system allows institutions to enter a street address, and then determines the census tract. When an address is not found, the mapping feature allows the user to determine the location of the property based on known milestones without resorting to a paper map. The system also provides census demographic information on a particular census tract, including income, population, and housing data. Institutions use this information to assess whether they are meeting the credit needs of the communities in which they operate. Use the Geocoding/Mapping System Census Update 2020 Geocoding System The Office of Management and Budget has not published any changes to the MSA or MetroDiv. For the 2020 activity, select 2020™ the drop-down menu when collecting geocoding information. Geocoding System 2019 The Office of Management and Budget (OMB) released the revised drafts of the Metropolitan Statistical Areas (MSAs) on September 14, 2018. The new MSA definitions apply to CRA & HMDA data collected on or after January 1, 2019 and incorporated into the and 2019 Census Data. For the 2019 activity, select 2019a6™ the drop-down menu when collecting geocoding information. Geocoding System 2018 The Office of Management and Budget (OMB) released the revised drafts of the Metropolitan Statistical Areas (MSAs) on April 10, 2018. The newsletter and replaces OMB Bulletin No. 17-01 issued on August 15, 2017. The new MSA definitions apply to CRA & HMDA data collected on or after January 1, 2018 and incorporated into the Geocoding and Geocoding System 2018. For the 2018 activity, select 2018a6™ the drop-down menu when collecting geocoding information. FFIEC Online Census Data System (formerly FFIEC Census Reports) is an online tool that can be used to access FFIEC census data by the MSA/MD, county, and census tract. The system also provides data for non-MSA areas, municipalities, and census tracts. To use the system, first select the state that includes the MSA/MD of interest. If MSA/MD covers an area of multiple states and you are looking for data for the entire MSA/MD, select the All in the state list option, otherwise if a state has been selected, you will only retrieve data for the MSA/MD portion in the selected state. There are four reporting options – Census Demographic Summation Summary, Census Data Summary, Census Population Data Summary, and Housing Census Data Summary. For 2014 search results: The mapping system corresponds to valid street addresses on the previous screen and displays a street map and information from MSA/MD, State, County, and Census Tract for that address. If the system cannot match the street address, it will generate a street map of the entire zip code. A red triangle will be in the center of the ZIP Code. You can navigate through the system to find the address by clicking on the map or arrows at the top of the map. To find the correct deal, you can zoom in/out by clicking the buttons at the top of the map. For more information about the census tract where the address is located, click the Get Demographic Census button. The information provided includes population numbers, housing count and income level of the census tract. For 2013 search results: The mapping system corresponds to valid street addresses on the previous screen and displays a street map and information from MSA/MD, State, County, and Census Tract for that address. If the system cannot match the street address, it will generate a street map of the entire zip code. A red triangle will be in the center of the ZIP Code. You can navigate through the system to find the address by clicking on the map or arrows at the top of the map. To find the correct deal, you can zoom in/out by clicking the buttons at the top of the map. For more information about the census tract where the address is located, click the Get Demographic Census button. The information provided includes population numbers, housing count and income level of the census tract. For 2012 search results: The mapping system corresponds to valid street addresses on the previous screen and displays a map information from MSA/MD, State, County, and Census Tract for this address. If the system cannot match the street address, it will generate a street map of the entire zip code. A red triangle will be the center of the CEP. You can navigate through the system to find the address by clicking on the map or arrows at the top of the map. To find the correct deal, you can zoom in/out by clicking the buttons at the top of the map. For more information about the census tract where the address is located, click the Get Demographic Census button. The information provided includes population numbers, housing count and income level of the census tract. New MSAs The June 2003 changes in the boundaries and terminology of the Metropolitan Statistical Area (MSA) raised questions from CRA reporters. Answers to these questions can usually be found in file formats. For your convenience, here are answers to the most common questions: The new MSAs can be found in OMB Bulletin No. 03-04, Annex, List 2. A five-digit MSA code from the new MSAs list should be used for 2004 CRA data. Use the five-digit code for Metropolitan Divisions when available. A four-digit MSA code from the old list of MSAs should be used for 2003 CRA data. Micropolitan Statistical Areas should not be used in CRA reports. Combined Statistical Areas should not be used in CRA reports. Geocoding/mapping System The FFIEC Geocoding/Mapping System is a web-based tool designed to help financial institutions meet the legal requirement to report information about mortgage, commercial and agricultural loans. Geocoding refers to the Metropolitan Statistical Area (MSA), State, County, Census Bureau (address information) that must be provided for each reported loan. The system allows institutions to enter a street address, and then determines the census tract. When an address is not found, the mapping feature allows the user to determine the location of the property based on known milestones without resorting to a paper map. The system also provides census demographic information on a particular census tract, including income, population, and housing data. Institutions use this information to assess whether they are meeting the credit needs of the communities in which they operate. Use the geocoding/mapping system FFIEC publishes various national census data that is used as input for HMDA/CRA reporting, processing, and analysis, and to verify location information for the HMDA/CRA property. Census data products are listed below and other descriptive information is provided on each product link. Census data is generally available in the second quarter of the current year. Data for calendar year 2013 are now available. Products for the years 1990 - 2012 are available in a few different sources; the source depends on the year of interest (see more details in the product links below). The calendar year 2012, census reports are based on the 2006-2010 American Community Survey's 5-year estimate. The list of MSAs, states, municipalities, sectors, Family Income MSA, family income of the sector, income levels of the sector and percentages of income generated using DATA ACS 2006-2010 2006-2010 available on the FFIEC website. Census products used for cra and HMDA reporting and analysis purposes from 2003 to 2011 based on census data from the U.S. Census Bureau; products for years prior to 2003 are based on information from the 1990 Census. When reporting CRA and HMDA data, it is critical that you use the correct census industry information. Using incorrect traffic numbers will result in invalid data submissions when you archive your annual CRA and/or HMDA reports. If you rely on external vendors to identify the location of your institution's lending sector (the geocoding process), make sure they are using the correct census information. The accuracy of your annual CRA and HMDA submissions, including the use of correct geocoding information, is your responsibility. Responsibility.
